Experiment - 6

Demonstration of web server & DNS using packet tracer.

- 1) Steps to creating the topology —
 1) create the topology using a PC, Switch & Server.
- 2) How we configure the Server by giving gateway, DNS & IP address. Next we open desktop from PC & goto the IP configuration to generate IP address automatic by enabling ☒ ON the DHCP.
- 3) goto the web server in PC ~~try~~ to search the IP address & name of the IP address, before this we add the IP & name in Service of Server.
- 4) using the website name which added in server is also used to search, Ping & send the data from source to destination.
